

Defender for Office 365

Integrated Protection for Email & Office Applications

Protect your Organization & Employees from Advanced, Targeted, Zero-day Phishing, Malware, & Business Email Compromise Attacks

Plan 1

Configuration, Protection, & Detection Capabilities

- Protection for Workloads**
Protection for SharePoint Online, OneDrive, and Teams
- Safe Links**
URL scanning and rewriting of inbound email messages in mail flow
- Safe Attachments**
Uses a virtual environment to check attachments in email messages before they're delivered
- Real-Time Detections**
Assists with threat responses by creating detailed reports on threats
- User & Domain Impersonation Protection**
Proactively checks for domains and users with similar names, preventing impersonation

Plan 2

Includes Plan 1 Capabilities, plus:

Automation, Investigation, Remediation, & Education Capabilities

- Threat Trackers**
Informative widgets and views that provide you with intelligence on different cybersecurity issues that might impact your company
- Threat Explorer**
Real-Time Detection with a wider array of tools, including Filters & Alert IDs
- Automated Investigation & Response**
Automated response to well-known threats, allowing you to focus on higher-priority tasks without losing sight of important alerts that are triggered
- Attack Simulation Training**
Tests your security policies and practices, as well as train your employees to increase their awareness and decrease their susceptibility to attacks
- Campaign Views**
Identify, investigate, & respond to phishing - lets you see the big picture of an attack faster and more complete than any human
